DRY NEEDLING CONSENT& INFORMATION FORM

What is Dry Needling?

Dry needling is a form of therapy in which fine needles are inserted into myofascial trigger points (painful knots in muscles), tendons, ligaments, or near nerves in order to stimulate a healing response in painful musculoskeletal conditions. Dry needling is not acupuncture or Oriental Medicine; that is, it does not have the purpose of altering the flow of energy ("Qi') along traditional Chinese meridians for the treatment of diseases. In fact, dry needling is a modern-science-based intervention for the treatment of pain and dysfunction in musculoskeletal conditions such as neck pain, shoulder impingement, tennis elbow, carpal tunne I syndrome, headaches, knee pain, shin splints, plantar fasciitis, or low-back pain.

Is Dry Needling safe?

Drowsiness, tiredness or dizziness occurs after treatment in a small number of patients (1-3%) and if affected, you are advised not to drive. Minor bleeding or bruising occurs after dry needling in 15-20% of treatments and is considered normal. Temporary pain during dry needling occurs in 60-70% of treatments. Existing symptoms can get worse after treatment (less than 3% of patients); however, this is not necessarily a "bad" sign. Fainting can occur in certain patients (0.3%), particularly at the first treatment session when needling the head or neck regions. Dry needling is very safe however, serious side effects can occur in less than 1 per 10,000 (less than 0.01%) treatments. The most common serious side effect from dry needling is pneumothorax (lung collapse due to air inside the chest wall). The symptoms of dry needling-induced pneumothorax commonly do not occur until after the treatment session , sometimes taking ~eyeral hours to develop. The signs and symptoms of a pneumothorax may include shortness of breath on exertion, increased breathing rate, chest pain, a dry cough, bluish discoloration of the skin, or excessive sweating. If such signs and/or symptoms occur, you should immediately contact your physical therapist or physician. Nerves or blood vessels may be damaged from dry needling which can result in pain, numbness or tingling; however, this is a very rare event and is usually temporary. Damage to internal organs has been reported in the medical literature following needling; however, these are extremely rare events (1 in 200,000).

Is there anything your practitioner needs to know?

- 1. Have you ever fainted or experienced a seizure? YES / NO
- 2. Do you have a pacemaker or any other electrical implant? YES/ NO
- 3. Are you currently taking anticoagulants (blood-thinners e.g. warfarin, coumadin)? YES/ NO
- 4. Are you currently taking antibiotics for an infection? YES / NO
- 5. Do you have a damaged heart valve, metal prosthesis or other risk of infection? YES/ NO
- 6. Are you pregnant or actively trying for a pregnancy? YES/ NO
- 7. Do you suffer from metal allergies? YES/ NO
- 8. Are you a diabetic or do you suffer from impaired wound healing? YES/ NO
- 9. Do you have hepatitis 8, hepatitis C, HIV, or any other infectious disease? YES/ NO

10. Have you eaten in the last two hours? YES / NO

Only single-use, disposable needles are used in this clinic.

Statement of Consent

I confirm that I have read and understand the above information, and I consent to having dry needling treatments. I understand that I can refuse treatment at any time.
